The IIRE Journal of Maritime Research and Development (IJMRD) provides a forum for critical reviews and research findings that underpin scientific foundations of all decisions. Selection of articles for publication in the IJMRD is completely merit based and articles are published only if favorable review and approval is received from a referee.

The concepts, views, expressions and examples in the published articles of IJMRD are those of the authors and not necessarily of the journal. The responsibility for the content of the articles remains exclusively with the author(s) concerned.

The Publishing team of IIRE does not necessarily subscribe to views expressed in the articles published under its banner. IIRE as the publisher disclaims any liability to any party for any loss, damage, or disruption caused by errors or omissions, whether such errors or omissions result from negligence, accident, or any other cause.

The copyright of the articles published under IIRE in its Journal of Maritime Research and Development (IJMRD) rests with the author(s) concerned, who may be contacted for any clarifications and/or reproduction rights.

Maritime sector has always been influencing the global economy. Shipping facilitates the bulk transportation of raw material, oil and gas products, food and manufactured goods across international borders. Shipping is truly global in nature and it can easily be said that without shipping, the intercontinental trade of commodities would come to a standstill.

Recognizing the importance of research in various aspects of maritime and logistic sector, IIRE through its Journal of Maritime Research and Development (IJMRD) encourages research work and provides a platform for publication of articles, manuscripts, technical notes, papers, etc. on a wide range of relevant topics listed below:

- Development in Shipping
- Ship Operations and Management
- Risk Assessment and Risk Management in Maritime Sector
- Maritime Safety and Environmental Protection
- Technological Developments
- Maritime Education
- Human Resource in Maritime Sector
- Trade Liberalization and Shipping
- Freight Rates Fluctuations and Forecasting
- Commodity Markets and Shipping
- Shipping Investment and Finance
- Maritime Logistics
- Multimodal Transport
- Inland Waterways Transport
- Maritime Statistics
- Port Management, Port Pricing and Privatization
- Economic and Environmental Impact of Shipping and Ports
- Other Current Topics of Interest in Shipping
MILITARY ACTIVITIES IN CHAGOS ARCHIPELAGO:
CONCERNS, IMPACTS AND WAY FORWARD

Anjelina Patrick

1. INTRODUCTION:
Diego Garcia is a highly guarded military base of the United States and strategically situated between East Africa, East Asia, and Southeast Asia, making it a vital outpost for basing US naval forces and projecting air and naval power into the region. In 1966, the United Kingdom signed an agreement with the United States, giving it permission to use the island as a naval base for an initial period of 50 years. This agreement is set to expire in 2016. Unless the UK or the US takes steps to terminate the agreement, it will automatically be extended for a further period of twenty years. The expiry of the initial agreement, brought hope for the islanders, who were forced to flee during the period 1967-1973, and then denied the right to return to their native land.

This issue brief studies the social and environmental impact of military activities on the Chagos Archipelago. It provides a brief history of Diego Garcia and its strategic importance for both the United States and United Kingdom. It examines Mauritius claims over the archipelago and provides an insight to the Chagos Marine Protected Area. The paper also makes recommendations or the way ahead to resolve the highlighted issues.

2. BRIEF HISTORY AND IMPORTANCE OF DIEGO GARCIA:
The Chagos Archipelago comprises of seven atolls and more than 60 islands, and Diego Garcia is the largest. It was claimed by the French during the 18th century and used for plantation of coconuts and fishing. Mauritius and its dependencies - Chagos Archipelago and Seychelles, were ceded to the United Kingdom by France in 1814 through the Treaty of Paris, and thereafter administered by Mauritius. Later, the Archipelago was retained by the United Kingdom, as one of the conditions for Mauritius to attain independence in 1968. On 30th December 1966, Britain agreed to lease Diego Garcia to the United States for the construction of a naval base. Due to its

small population, the UK successfully uprooted the island’s people, as well as managed to avoid large-scale controversy.iii The depopulation from 1968 to 1973 was undertaken by intimidation and restricting inward migration. The displaced Chagossians settled mostly in Mauritius and Diego Garcia is often regarded to be at the core of United States’ strategy in the Indian Ocean. The United States did not entail any monetary liability on account of the lease, but a US $ 14 million ‘discount’ to UK was offered for acquiring the Polaris nuclear missiles. The island is strategically significant for the United States as it is remote, secure and centrally placed. It is relatively immune from land based attack and, due to the absence of a local population; the base has been insulated from local political conflicts over the last five decades.iv

The island is home to about 1,700 military personnel and 1,500 civilian contractors with only about 50 British troops. The island is used jointly by the US Navy and the Air Force.v A number of air operations during the 1991 Persian Gulf War, 1998 Iraq War, and 2001 strikes in Afghanistan were launched from Diego Garcia. During the Cold War, Diego Garcia was highly valuable for the United States to monitor the activities of the erstwhile USSR. In Post-Cold War, the base is vital for US security and foreign policy interest such as the war on terror and monitoring of other naval activities in the Indian Ocean Region.

3. MAURITIUS CLAIMS OVER THE ARCHIPELAGOS:
Mauritius government has maintained its claim to sovereignty over the Chagos Archipelago, arguing that it was illegally separated from Mauritius, before it gained independence in 1968. Mauritius views the issue as a breach of United Nations resolutions on decolonization, most notably the United Nations General Assembly Resolution 1514/XV of 14 December 1960, stating:

“Immediate steps shall be taken... all other territories which have not yet attained independence, to transfer all powers to the people of those territories, without any condition or reservations...enable them to enjoy complete independence and freedom.”vi

The Chagossians have unsuccessfully waged a number of legal battles to resettle on the island since 2000. However, they have achieved a few successes like financial
compensations and the right to own a British passport. The UK also came under criticism after it declared the BIOT as marine reserve, with the exception of Diego Garcia, leading to Mauritius filing a case under the United Nations Convention on the Law of the Sea (UNCLOS).

4. THE ISSUE OF CHAGOS MARINE PROTECTED AREA - SOCIAL AND ENVIRONMENTAL IMPACT:

In February 2009, the British government announced plans to establish a marine reserve in the BIOT. After numerous protests by Mauritius, the UK initiated a four-month public consultation on its decision to establish a Marine Protected Area (MPA) in Chagos. Chagos MPA was declared on 1st April 2010 by the BIOT Commissioner. It is one of the largest ‘No-take’ MPA *i.e.* prohibition on fishing, dredging, extraction of minerals, construction and dumping. The MPA covers the entire 200-mile Exclusive Economic Zone (EEZ) around the territorial waters of the Chagos Archipelago, except for Diego Garcia, with the MPA ending 3 nautical miles around the island. This raised several questions including whether it was an excuse to prevent the inhabitants from returning back to their homes or if it was genuinely meant to conserve the local ecology.

The Chagos MPA came under controversy after a diplomatic cable was leaked on 1st December 2010, which stated that the reserve was an outcome of a deliberate plan by the United Kingdom and United States, with an agenda of preventing the indigenous population from returning to their land.

On 20th December 2010, the Mauritian Government commenced litigation proceedings against the UK Government under UNCLOS to challenge the legality of the Chagos MPA. During the proceedings, it was observed that the United Kingdom, had violated 1982 UNCLOS provision, which required it to consult the Mauritius prior to establishing the MPA.

The Tribunal found that the UK was bound under international law to:

(a) Return Chagos back to Mauritius, when it was no longer needed for defense purposes.

(b) Preserve the benefits of any minerals or oil discovered in or near the Chagos Archipelago for Mauritius.
(c) Ensure that fishing rights in the Chagos Archipelago would remain available to Mauritius as far as practicable. viii

From the United Kingdom’s perspective, the MPA was an effort to protect the flora and fauna of the Chagos archipelago. The US has also been trying to highlight its seriousness in undertaking international environmental responsibilities through the MPA. Their actions may be considered to resemble the concept of “greenwash” that tends to distract attention from the negative aspects of militarism, including instances of environmental degradation, the mistreatment of human subjects, and the perpetuation of colonial forms of government. According to Peter Harris, professor in the University of Texas, “UK clearly believes that it is possible to marry military and environmental objectives in BIOT, but only at the exclusion of the Chagossians’ right of return”. ix

Military construction and normal operations of the base, have generated numerous environmental concerns apart from creating a number of social issues. There has not been any extensive study on the environmental issues, due to denial of public access to the island. Diego Garcia’s lagoon has been subject to blasting and dredging. For instance, a paved airport runway was built on a 3.6 km trail of land on crushed coral. A number of trees were cut down to make way for the base, leading to wildlife retreat and soil erosion. Since its construction, the island has seen more than one million gallons of jet fuel leaks, water fouled with diesel fuel sludge, the warehousing of depleted uranium-tipped bunker buster bombs, and the likely storage of nuclear weapons. x Anchor chains are also causing substantial damage to the corals especially in the northern basin of Diego Garcia. US ships have been pouring waste including treated human sewage for three decades into the lagoon where a Foreign Commonwealth Officer has admitted that the British “no-discharge policy” were not being followed by US vessels. Various tests have found high levels (four times) of nutrients - nitrogen and phosphates causing damage to corals on Diego Garcia. xi This questions the efficacy of the Marine reserve with the exclusion of Diego Garcia, where military continues with its environment damaging practices. Large amount of floating plastic debris has been found on the beaches of Chagos.
5. POTENTIAL WAY FORWARD:
With the Indian Ocean becoming the center stage of global geopolitics, it may be necessary to recognize the significance and utility of the archipelago to the US. However, the Outer Chagos Islands, which lie 100 miles from Diego Garcia and have never been used for defense purposes, could be ceded to Mauritius without jeopardizing the functionality of the base. In addition, adequate compensation may be provided to the indigenous population, for the damages suffered as a result of their displacement.

Co-management of the archipelagos could initiate bilateral talks between the UK and Mauritius. Ultimately, proper attention should be directed towards the military’s environmentally destructive activities rather than just creating an MPA. Appropriate steps must be taken to ensure that the ‘no-discharge’ policy is followed strictly. Proper environmental assessments should be undertaken before any significant activities such as dredging, which may affect the island’s ecology. This would help in reducing the possibility of ecological damage and costs. After proper assessment, the particular operation may be tailored to reduce environmental damage. Strict environmental monitoring system must be in place, especially to oversee the proper disposal of toxic waste, etc. The role of multilateral co-operative mechanisms in resolution of such problems cannot be overstated; for instance, the IORA which has ‘marine security and environment’ as one of its agenda, can play a critical role in preserving the fragile environment as well as bringing about redressal for the social issues. Mauritius is a member country of the IORA and UK and US are dialogue partners.

6. CONCLUSION:
Amidst the growing demands of the Chagossians to return back, and Mauritius’s claims of sovereignty, the UK has continued to lease the island to US until 2036. The MPA for now serves to bypass the sovereignty of Mauritius over the islands and the strategic importance of Diego Garcia, rather than ecological or social concerns. A number of measures can be taken to reduce the adverse impacts of the military installation at Diego Garcia, which includes renewed thrust, especially on the part of IORA.

Developing and Delivering Integrated Educational and Research Programs

- Benchmarking surveys
- Industry research
- Peer reviewed journal
- Working paper series
- White papers
- Application notes
- Training material distribution
- Book publishing

Compensation and Benefits Surveys

IIRE has been conducting a ‘Compensation and Benefits Survey’ since 2009 for the sailing officers in various ranks of all types of merchant vessels of foreign shipping companies. The report of the survey has become necessary for the industry players helping them in positioning themselves with regards to wages of seafarers.

IIRE Journal of Maritime Research and Development (IJMRD)

IIRE Journal of Maritime Research and Development (IJMRD) is a platform for publication of articles, manuscripts, technical notes, etc. on a wide range of Maritime related topics. The academic works are reviewed by a panel of experienced academicians prior to publication.

ISF Working Paper Series (ISFIRE)

ISFIRE is a platform for authors in Economics to publish their research/book chapters, academic articles, reviews/notes which are under submission, or forthcoming elsewhere. The papers are reviewed by experts and eminent academicians.

Publishing of Books

IIRE is a one stop solution for publications with designing, proof reading and copy editing support. IIRE also has an ISBN number for its publications and supports distribution through online book stores.
